TwinLore

AI Data Notice

English

v1.2 · Effective November 3, 2026

Operator: 北京简观万境科技有限公司
Beijing Jianguan Wanjing Technology Co., Ltd.
help@twinlore.app

1. Scope and Separate Choices

This notice applies to the TwinLore app and related Services expressly referring to it, and forms a bundle with the Terms of Service and Privacy Policy. Chinese and English describe the same permission scope. AI permission supports the features you request; it does not authorize public disclosure of your content or enable optional Help improve.

2. Data and Recipients

Conversation, research, personal memory and skill processing provide relevant text and context to DeepSeek as needed. Image understanding and generation, retrieval embeddings and reranking provide relevant text, images or document excerpts to Alibaba Cloud Model Studio. Video understanding and some speech-vocabulary processing provide relevant video material, vocabulary or necessary context to Google Gemini through OpenRouter. OpenRouter routes these requests and Google supplies the relevant model service. Permission alone does not send your entire account to every service. Material changes to recipients or purposes require updated disclosure and necessary permission before processing.

2.1 Voice, Search and Maps

Speech recognition and file transcription provide audio to Alibaba Cloud speech services in Singapore; speech playback provides the text to be read. Long recordings and uploaded audio may produce transcripts with times and speaker labels. Labels can be wrong and are not identity recognition. Web search provides relevant queries to Tavily; maps provide necessary locations and query parameters to Amap or Apple Maps. Access remains subject to app and operating-system permissions and does not allow boards to read other accounts or arbitrary device data.

3. Processing Locations and Purposes

The operator is Beijing Jianguan Wanjing Technology Co., Ltd. Current beta accounts and their primary application data are hosted in Hong Kong. The model, speech, search and map services above may process necessary data elsewhere, including Alibaba Cloud speech services in Singapore. The distribution region does not mean all processing, backups or personnel access occur in the United States or Hong Kong. Data supports answers, generation, retrieval, personal memory and related features you request. Material changes to recipients or purposes require updated disclosures and necessary permission before processing. Your consent does not replace mandatory international-transfer or other protection requirements.

4. Withdrawal and Saved Content

You can turn off AI in Privacy & data in the app. This stops new AI requests and background AI updates and cancels work where still possible; requests already transmitted may not be recalled. Withdrawal itself does not delete saved content. Available functions, retention and deletion remain subject to the Privacy Policy and account status. Re-enabling AI does not automatically replay missed tasks. Third-party AI processing permission does not authorize general model training. Section 5 of the Privacy Policy explains optional “Help improve” permission and withdrawal.

5. Versions and Contact

We record the document bundle, individual document versions and checksums, language, time and permission choices you confirm. Publishing a new version of any of the three documents requires renewed confirmation of the whole bundle in the app; publishing a change does not retroactively expand earlier permission. Rights and permission scope are the same in Chinese and English. Contact: help@twinlore.app. Operator: 北京简观万境科技有限公司 (Beijing Jianguan Wanjing Technology Co., Ltd.).
